PROFESSIONAL SUMMARY

Final-year B.Tech (Computer Science) student and full-stack developer with 6+ months of hands-on experience building cross-platform **Android & iOS apps** in Flutter and self-managed backends in **Spring Boot**. Built and shipped a Flutter workforce app used by **150+ active users** with ERPNext integration, and am building a full-stack accommodation platform with **145+ REST APIs**, real-time WebSocket chat and Razorpay payments. Comfortable owning a product end-to-end: design, development, cloud deployment and release. Seeking a Software Engineer, Flutter or Backend Developer role to build scalable products in a collaborative team.

TECHNICAL SKILLS

Languages: Java, Dart, C, SQL

Mobile: Flutter (Android & iOS cross-platform), Provider state management, Firebase (Auth, Firestore, Cloud Messaging), Face ID / biometric auth

Backend: Spring Boot, REST API design (145+ APIs), WebSocket (STOMP), Spring Scheduler, session & token-based authentication

Databases: MySQL, MongoDB

Cloud & Tools: AWS, Google Cloud Platform, Cloudinary, Git & GitHub, Play Store release management

Integrations: Razorpay payments, Google Maps API, ERPNext / Frappe API, Firebase Cloud Messaging, real-time chat

Core CS: Data Structures & Algorithms (Java), OOP, DBMS

PROJECTS

Pioneer Tech – Workforce Management App | *Flutter, ERPNext, Firebase* **Live on Play Store**

- **150+ active users** on a production Flutter app (Android & iOS) for attendance, leave, travel and advance-request workflows, built for a client.
- Integrated the **ERPNext / Frappe** backend APIs with secure session-based login, attendance logic (shortage / completed / overtime) and Face ID authentication on iOS.
- Built **geofence-based** site detection (Haversine matching against ERPNext Geofence data) for punch-in / punch-out, and a full **push-notification system** with Firebase Cloud Messaging.
- Added English & Arabic localization; fixed critical production issues including an iOS Firebase white-screen crash, Play Store release / versioning problems and cross-platform UI bugs.

Nestora – Accommodation (PG) Rental Platform | *Spring Boot, Flutter, Next.js* **Under Development**

- Designing and building a full-stack platform for PG / rental discovery with a self-hosted **Spring Boot backend and 145+ REST APIs**; Flutter mobile app and Next.js web front-end.
- Built **real-time chat** using WebSocket (STOMP) with message edit / delete and push-notification alerts.
- Implemented tiered property-access subscriptions with **Razorpay** payment integration and automated success / failure handling; automated subscription-expiry via Spring Scheduler.
- Integrated Cloudinary media upload (images, video tours, 360° photos), Google Maps-based property search and admin revenue dashboards.

EXPERIENCE

Freelance Mobile & Full-Stack Developer | *Self-Employed* **6+ Months**

- Delivered 2+ end-to-end projects independently and in teams: mobile apps, backend API design and cloud deployment (AWS / GCP).
- Led Flutter development for a client app now used by 150+ people, from requirements through Play Store release and ongoing bug-fix / feature cycles.
- Owned functional and non-functional requirements: performance, security, scalability and reliability.

EDUCATION

B.Tech, Computer Science (Final Year) – Galgotias University, Noida

Diploma in Engineering (Polytechnic) – 3 Years

Secondary Education (10th) – 2021

KEY STRENGTHS

End-to-end ownership • Problem-solving • Clean, maintainable code • Self-driven learner • Fast adaptability
